

APPLICATION OF AN ANATOMIC SPLINT

- Check the scene
- Check the victim and obtain consent
- Take body substance isolation precautions
- Support the injured area above and below the site of the injury
- Check for feeling, warmth and color below the injured area
- Place several folder triangular bandages or other securing material above and below the injured area
- Tie the triangular bandages securely
- Recheck the injured part for feeling, warmth and color

Splinting Using A Blanket

Splinting using a blanket in which the victim's legs are immobilized by tying blankets at intervals from mid-thigh to feet.

The guidelines for splinting include:

1. Support the injured area above and below the site of the injury, including the joints.
2. If possible, splint the injury in the position that you find it.
3. Don't try to realign bones or joints.
4. After splinting, check for proper circulation (warmth, feeling, and color).
5. Immobilize above and below the injury.
